

Fig. 1

1. The present invention relates to a system for monitoring the use of a device. 2. The system includes a device, a communication channel, and a use monitor. 3. The device is connected to the communication channel, which is connected to the use monitor. 4. The use monitor is configured to receive data from the device via the communication channel. 5. The use monitor is configured to analyze the data to determine the use of the device. 6. The use monitor is configured to generate a report based on the analysis. 7. The report is generated in response to a request from a user. 8. The report is generated in response to a request from a system administrator. 9. The report is generated in response to a request from a system administrator. 10. The report is generated in response to a request from a system administrator.
